INDEX

α_2-macroglobulin 45, 56, 57
ACTH (adrenocorticotrophic hormone) 190
adrenal glands 176–7
ageing, reproductive 215–39
  changes in female sexual behaviour 233–4
  female rodents 221–9
  hypothalamus 218–20
  pituitary 220–1
  testicular function and male sexual behaviour 234–7
  women 229–32
albumin column sperm separation 307
allogeneic pregnancy 183–5
altered self 196
androstenedione 232
angiogenesis 115, 116, 120
anoestrus 258
anti-aromatase test 148–50
antibody tagged sperm 322
antigens, of paternal and fetal origin 181, 195–6
antigen-specific T cells 195–6
anti-Müllerian hormone (AMH) 139–57
  cloning and sequencing of AMH gene 142–3
  effect on adult ovary 154
  effects upon female genital primordia 147–50
  expression and ontogeny 143–6
  expression *in vitro* 146
  hormonal regulation 146–7
  mapping bioactive site 150–3
  PMDS 154–6
  protein purification 140–2
  testicular descent 153–4
  testicular differentiation 153
apical surface of uterine epithelium 89, 91, 92–3, 97
ascorbic acid 63–4
assisted reproduction 60–1, 319–20, 322
attachment, embryo
  cell adhesion molecules, *see* cell adhesion processes
  CG 12, 16

basal lamina 34, 36
  invasion by trophoblast 93, 103–17, 118–20
  ovary 38, 47, 48, 49
  testis 37, 39
basement membranes 34–5, 65
  ovary 48, 54
  testis 39–40, 41, 45
Bennett's wallaby 257, 259, 286, 289–91
  general features of reproductive cycle 259–63
  photoperiod 271–84 *passim*
  photorefractoriness 287–9
blastocyst, diapausing 259–63
bromocriptine 268–70, 282
brush tail possums 252, 255

cadherins 100–1, 104, 118, 120
calcium, intercellular 10
CAM-105 101, 118, 120
catecholamines (CAs) 217, 218–19, 220, 238
cattle sperm 321–2
cell adhesion processes 87–122
  cellular aspects of implantation 90–4
  classification of cell adhesion molecules 118–19
  implantation models 94–6
  molecules influencing embryo attachment 96–103
  ovarian steroids and uterine receptivity 88–90
  trophoblast invasion of basal lamina and decidua 103–17
chondroitin sulphate proteoglycans 51–3, 60–1, 114
chorionic gonadotrophin (CG) 2, 11–24
  establishment of early pregnancy 18–24
  first secretion 13–16
  immunization against 16
  regulation of secretion 16–18
  see also human chorionic gonadotrophin
CL–follicular axis 263, 264, 266–7
cloprostenol 3, 5, 6, 8, 18–19
  see also $PGF_{2\alpha}$
collagen
  cell adhesion processes in implantation 113–14, 120
  ovary 47, 63–4
  testis 38–9, 41
collagenase 55–7, 59, 61
collagen-induced arthritis (CIA) 197–8
continuous breeding 256–8
cord development 36–8

corpus luteum (CL) 1–24
  development of embryonic signals 11–18
  ECM 61–3
  quiescence 259–63
  regulation of repression 2–11
  rescue 18–23, 24
corticosteroids 176–7
creeping vole (*Microtus oregani*) 317–18
cytokines 171

decidua, invasion by trophoblast 93, 103–17, 118–20
decidual cell reaction 91, 93–4
dehydroepiandrosterone (DHEA) 230, 232
dermatan sulphate 51–2
differentiation
  regulation of invasion 107–9
  sexual, in gonadal embryology 36–8
  testicular and AMH 153
dihydrotestosterone (DHT) 230
DNA 304–6, 308
  sperm analysis for DNA content 315–17
  see also flow cytometry
DN (double negative) cells 185–6
domperidone 268, 282–3
DP (double positive) cells 185–6
dual-chamber culture system 45–6

E-cadherins 100, 104, 118
EHS tumour 110
embryonic development, and reproductive ageing 226–7
embryonic signals 11–18
  activation of embryonic genome 12–13
  establishment of early pregnancy 18–24
  start of pregnancy 11–12
  see also chorionic gonadotrophin
endocrine axes 251, 263–70
  see also neuroendocrine function; neuroendocrine-immune axis
entactin 102, 118
epi-illumination flow cytometer 310–11
eutherian mammals 250, 251
extracellular matrix (ECM) 33–65
  cell adhesion processes in implantation 88, 90, 94, 95, 105–17, 118
  comparison of ovary and testis 64–5
  ovary 47–64
  postnatal maturation of testicular 38–9
  pre-differentiation 35–6
  sexual differentiation 36–8
  testis 39–47

facultative seasonal breeding 258
fertility
  reproductive ageing 224–7
  results from flow-sorted sperm 320–2
fetal ovary 148–50
fibroblasts 189, 190
fibronectin
  cell adhesion 111–12, 118, 120
  ovary 49, 51, 60, 61
  testis 37, 39, 41, 44
flow cytometry (FCM) 308–13
  epi-illumination 310–11
  fertility results from sorted sperm 320–2
  hydrodynamic orientation 309–10
  modified orthagonal (MFCM) 312–13, 314, 318–19
  sperm sorting 317–20
follicle(s)
  ECM 47–67
  reproductive ageing 231
follicle-stimulating hormone (FSH) 174
  AMH regulation 146–7
  ECM of ovary 52, 59
  ECM of testis 44–5
  hypothalamic–hypophyseal–follicular axis 264–6
  reproductive ageing 217, 218, 220–1, 230–1, 232, 235–6

galactosyltransferase 101–2
ganglionectomy 286–7
genome 216
  activation of embroyonic 12–13
glucocorticoids 176–7
glycosaminoglycans 51, 61
gonadotrophin-releasing hormone (GnRH)
  hypothalamus 174–5, 218
  regulation of CG secretion 16–17, 23
  reproductive ageing 218, 220–1
gonadotrophins
  $PGF_{2\alpha}$ 5–9
  reproductive ageing 229–31
  thymus 172
  see also chorionic gonadotrophin; follicle-stimulating hormone; human chorionic gonadotrophin; luteinizing hormone
granular endometrial gland (GMG) cells 194
granulosa cells
  AMH production 144, 145–6
  ECM 47–8, 49–51, 57
grey kangaroo 252, 258
growth hormone (GH) 176

heparan sulphate proteoglycans (HSPG)
  cell adhesion processes 98–9, 114, 120
  ECM 51–3, 61

human chorionic gonadotrophin (hCG) 178
  $PGF_{2\alpha}$ 3–4
  rescue of CL 18–19, 20, 22
  see also chorionic gonadotrophin
hyaluronate 112–13, 120
hyaluronic acid 51–3, 60
H–Y antigen 307–8
hypothalamic–hypophyseal–follicular axis 263, 264–6
hypothalamus 174–5
  reproductive ageing 216–17, 230, 235–6, 238
hypothyroidism 175–6

immunity
  maternal, during pregnancy 178–81, 193–6
neuroendocrine–immune axis 173–8
immunization, against CG 16
immunology
  pregnancy and maternal thymus 183–5
  sperm separation 307–8
implantation, *see* attachment; cell adhesion processes
indomethacin 59
inhibin 14–15, 20–1, 24
  regulation 22
insemination 319–20, 322
intact viable sperm, sorting 319
integrins 102–3, 104–5, 109
interleukin 171
invasion
  attachment and 90–2
  of basal lamina and decidua by trophoblast 93, 103–17, 118–20
in vitro fertilization (IVF) 319–20, 322

lactational quiescence 256, 259–61, 267–70
lacto-*N*-fucopentaose-I (LNF-I) 99–100, 120
laminin
  cell adhesion processes in implantation 102, 107–11, 118, 120
  ovary 48
  testis 39, 41, 42–3, 47
lectins 101–2
Leydig cells 39–40, 236
LH-releasing hormone, *see* gonadotrophin-releasing hormone
lipoprotein 53–4
litter size 224–7
luteinization 50
  and luteal ECM 61–3
luteinizing hormone (LH)
  hypothalamic–hypophyseal–follicular axis 264–6
  neuroendocrine–immune axis 174–5, 176
  $PGF^{2\alpha}$ 3–4
  reproductive ageing 217, 218–19, 220–1, 230–1, 232, 235–6
luteolysis, *see* prostaglandin $F^{2\alpha}$

macrophages 187–8
Macropodoidea, *see* seasonal breeding
marmoset monkey 3–23 *passim*
marsupials, *see* seasonal breeding
maternal immunity, during pregnancy 178–81, 193–6
Matrigel 110–11
medullary epithelial rings (MERs) 188–91, 195
melatonin 173–4
  seasonal breeding 251–3, 275–80, 281, 284, 285, 287–8
menopause 232
  perimenopause 231
menstrual cycle 229–30
  see also oestrus cycles
mesenchyme 147–8
mesometrial decidua 94
metalloproteinases 55–7
  see also collagenase
modified orthogonal flow cytometer (MFCM) 312–13, 314, 318–19
mucin glycoproteins 97, 120
myoid (peritubular) cells 40, 41, 43–4

NA (noradrenaline) 218–19, 238
natural killer (NK) cells, uterine 194
natural suppressor (NS) cells 195
neuroendocrine function, reproductive ageing and 215–39
neuroendocrine–immune axis 173–8
  see also endocrine axes
nidogen 102, 118
null cells 194–5

obligate seasonal breeding, *see* seasonal breeding
oestradiol 222, 225, 230
  female thymus 179, 180, 192, 198
  reproductive ageing 227–9
oestrogen
  female thymus 177–8, 179, 192, 197, 198
  reproductive ageing 219–20, 238
oestrone 232
oestrus cycles 221–4, 238–9, 254
  see also menstrual cycle
oocyte maturation 60, 154
osteonectin (SPARC) 115–16, 118, 120
osteopontin 105, 120

ovaries/ovary
AMH 144, 145–6, 154
ECM 35, 38, 47–65
fetal and AMH 148–50
function and ageing 221–4
steroid hormones 88–90, 177–8
thymus and development of 192
ovulation 54
oxytocin 175–6

Pcadherin 101, 104, 120
perimenopause 231
peritubular (myoid)cells 40, 41, 43–4
perlecan 98, 102, 118
persistent Müllerian duct syndrome (PMDS) 154–6
phosphoinositide (PI) turnover 4, 5–9
photoperiod 250, 251–3, 263, 270–85, 289–91
mechanism of response to change 284–5
pituitary response to change 280–4
reproductive response to manipulation 270–5
role of pineal gland 275–80
photorefractoriness 272–5, 287–9
physical methods of sperm separation 306–7
pinealectomy 285–7
pineal gland 173–4
seasonal breeding 251, 275–80
pineal–hypothalamic–hypophyseal–CL axis 263, 264, 267–70, 273
pituitary–CL axis 263, 264, 267–70, 273
reproductive ageing 216, 217, 220–1, 235–6
response to photoperiod change 280–4
placenta 178
plasmin cascade 57–8
plasminogen activator (PA) 44–47, 57–8, 61
plasminogen activator inhibitor (PAI) 45, 57, 58
PNA (peanut antigen)cells 186
polarized uterine epithelium 92, 95–6
pregnancy
cells occurring only in 194–6
establishment of early 18–24
maternal immunity during 178–81, 193–6
and maternal thymus 181–96
RA and 197–9
pregnancy-associated proteins 180–1
pre-receptive uterine state 88–9, 96–7
primary decidual zone 93–4, 120
progesterone 59
female thymus 177, 179–80, 197
luteolysis 9–10
$PGF_{2\alpha}$ 4, 6–9
regulation 22
reproductive ageing 227–9, 230
rescue of CL 18–20, 24
seasonal breeding 260–1, 262, 271, 272, 282, 283, 285
prolactin (PRL) 59, 224–5
female thymus 176, 197
reproductive ageing 219, 224
seasonal breeding 267–70, 280–5, 290–1
prostaglandin $F_{2\alpha}$ ($PGF_{2\alpha}$) 2, 23, 24
active luteolysin 9–11
changing sensitivity to 5–9
luteolyic action 2–5
prostaglandins 59
proteases
cell adhesion processes 106–7, 118, 120
hormonal regulation 58–60
ovarian 55–60
proteoglycans 51–4
proteolytic enzymes 44–5, 54–5
pseudopregnancy
female thymus 191–3
repetitive 223–4

quiescence, *see* lactational quiescence; seasonal quiescence

rabbit sperm 320, 321
receptivity, uterine 88–90, 87–103
red kangaroo 257–267–8
red-necked wallaby 257
refractory uterine state 88–9, 103
relaxin 22–3, 24, 59
reproductive ageing, *see* ageing
reproductive capacity 224–6
rhesus monkey 3–23 *passim*
rheumatoid arthritis (RA) 197–9
rodents, ageing 238–9
female 221–9, 233
male 234–5

seasonal breeding 249–91
control of initiation and end of breeding season 287–9
effects of pinealectomy 285–7
hormonal control 263–70
model of regulation 290–1
patterns of reproduction in marsupials 253–9
role of photoperiod 270–85
tammar and Bennett's wallaby reproductive cycle 259–63
seasonal quiescence 259, 261–3, 267–70
see also seasonal breeding
secondary decidual zone 94, 120

seminiferous tubule 38–9, 40–6
serine proteases 57–8
serotonin 173–4
Sertoli cells
  AMH production 143–4, 144–5, 146
  ECM 40, 41, 42–3, 43–4, 44–5, 45–6
17_{α}-hydroxyprogesterone (17_{α}-OH-P) 230
sex preselection 304–5
  see also sperm separation
sex steroids, *see* steroid hormones
sexual behaviour
  ageing females 233–4
  ageing males 235–237
sexual differentiation 36–8
sialic acid 52
sodium meclofenamate 11
somatic cells 35–8
SPAN cells (pregnancy associated natural suppressor cells) 195
SPARC (osteonectin) 115–16, 118, 120
spermatogenesis
  ECM 46–7
  reproductive ageing 234–5, 236–7
sperm nuclei 319
sperm separation 303–22
  basis for X and Y separation 305–6
  fertility results 320–2
  flow cytometry 308–13
  long arm of Y chromosome 308
  markers 308
  measurement for proportions of X and Y sperm 317
  methods 306–8
  verification 313–20
steroid hormones
  female thymus 177–8, 179–80, 182
  ovarian, and regulation of uterine receptivity 88–90
  see also under individual names
steroidogenic pathway, sex-reversal of 148–50
stroma 47–8
suckling stimulus 256, 269
  see also lactational quiescence
surface charge, sperm separation by 307
swine sperm 321
syndecan 98, 118

tammar wallaby 252, 255, 257, 259, 289–91
  general features of reproductive cycle 259–63
  hormonal control of reproduction 263–70
  photoperiod 270–85*passim*
  photorefractoriness 287–9
  pinealectomy 285–7
T-cells 173, 195–6, 197
tenascin 115, 116–17, 120
testes
  decline in function due to ageing 234–5, 236–7
  ECM 35, 37, 38–47, 64–5
  production of AMH 143–5, 146
  role of AMH in testicular descent 153–4
  role of AMH in testicular differentiation 153
testosterone 140, 141
  secretion and ageing 234, 235, 236, 237
TGF-β (transforming growth factor) 148
theca cells 47–8
thrombospondin (TSP) 115, 116, 118
thymic hormones 170–1, 176, 188–90, 198
thymic involution 181–3, 183
thymocytes
  changes in subsets during pregnancy 185–7
  maturation 167–9
thymus gland 165–99
  activity during life 172–3
  cells of the microenvironment 169–70
  communication between periphery and 171–2
  embryological origins 166–7
  maternal immunity during pregnancy 178–81
  neuroendocrine–immune axis 173–8
  pregnancy and maternal 181–96
  RA and pregnancy 197–9
  recovery after birth 196–7
  significance of changes for pregnancy 193–6
TIMP (tissue inhibitor of metallo-proteinase) 56–7, 63
tPA (tissue-type PA) 44–5, 57–8, 60
trophoblast 90, 181
  invasion of basal lamina and decidua 93, 103–17, 118–20
tumour invasion 107

uPA (urokinase-type PA) 44–5, 57–8
uterine NK (natural killer) cells 194
uterine receptivity 88–90, 97–103

viable sperm, sorting 319–20

X and Y sperm separation, *see* sperm separation

zone-encased embryos 96–7
zona pellucida membrane 48

AUG 25 1994
